

Conference Recorder

Voice logger specially designed for conference application

Matelcom is proud to announce the latest development in our voice logger product line – the Conference Recorder - Conference Logger. The Conference Recorder is a network based voice logger equipped with a sensitive built-in microphone, allowing you to record meetings, briefings, lectures, interviews, and other important events.

Conference Recorder connects to a host computer (such as a laptop) via LAN and stores recorded voice files on the host computer's hard drive, marking it easy to archive and retrieve voice files. It is also possible to monitor the recording in real time remotely over LAN.

- Switchable between conference and telephone recording
- Cyclic hard drive usage for non stop recording
- Real time monitoring over LAN
- Windows Wav file compatible
- Recordings saved with date, time, length and notes
- Sectional playback capable
- Password protection
- Fast search and fast play functions
- Send voice files by email
- Voice (VOX) activation
- Network capability

Comparisons:

	Conference Recorder	Other Recorders
Sound Collecting	High sensitivity with extended range	Low power with limited range
	Omni-directional table top usage	Hand held usage
Applications	Conferences, meetings, conference calls...	Limited to short distance recording
