

Professional answering machine tiptel 570 office

Its varied applications turn the tiptel 570 office into a modern communication switchboard for your office. A flash memory chip is integrated for voice messages and OGMs.

It has a 120 minute capacity and produces a professional business card on your telephone through its clear playback.

When callers leave personal messages a mailbox system informs individuals in the company by voicemail or SMS.

Alternatively the mailbox system can also be used simply to provide information, which the caller selects using the telephone keypad.

Numerous connections

There is a connection for a foot pedal so that many messages or longer dictations can be listened to comfortably on a daily

basis. A headset can be connected so that colleagues are not disturbed when replaying messages. After starting call back by pressing a button, the headset can also be used for calls. A separate alarm input to a monitoring system or a push button can be connected so as to create a silent alarm for emergencies by telephone. Audio connections are available to transfer and archive voice data.

Teamwork with the PC

Operation is always simple and clear, thanks to the large graphics screen and menu features. It is even easier with a PC, for which the tiptel 570 office has a USB connection. All SMS messages received can be transferred to or sent from the PC.

- Recording/OGM capacity 120 minutes
- Professional quality
- 14 OGMs with no time limit
- SMS in fixed network, calling line identification presentation (CLIP)
- Integrated mailbox system for 4 employees
- Headset connection
- Foot pedal connection, alarm input
